**Subject:** RE: [EXTERNAL] RE: Do you accept chemical recycling (molecular recycling) products?

Thank you so much for taking the time to answer my question. This helps a lot.

CAUTION: External Email

Hello Betty. Apologies for the delay in getting you a direct response. We received your inquiry through a variety of channels and there was some confusion on who was sending a response and if the response was sent.

The CPGs do not specify whether or not chemical recycling is within the definition of recycled content or excluded from the definition. As you might be aware, we are reviewing CPGs currently for potential updates and this is one item that will be included in that review. However, that means that we do not have a direct answer for you at this time.

In addition, we are working within the America Recycles effort to better define terms. In that process, which is still underway, we are working on a list of definitions. We have spoken with ACC and have developed a differentiation amongst mechanical recycling and chemical recycling. In addition, we have developed more distinction within the chemical recycling space and instead of using the term chemical recycling we are instead going to use the terms depolymerization, gasification, pyrolysis, and solvolysis.

Work on both of these items will be occurring in 2021 and more details will be released as we work through those processes.

Thank you,  
Ron Vance, Chief  
Resource Conservation Branch  
U.S. Environmental Protection Agency

Kim,

Thank you for your email.

Ron, could you please share the response you sent to Eastman so I can share it with my colleagues? Thank you.

Regards,  
Ashby

Ashby:

It's best if you reach out to Ron Vance directly. I've spoken to Ron and it seems that Eastman has contacted multiple EPA Regions asking the same question. In order to be responsive to Eastman, the EPA response should go to one person and my understanding is that Ron was going to take care of it.

Thanks, hope this helps! I've included both Ron and my manger on this email so we're all in the loop.

~Kim

Kim,

Were you ever able to get a response from your colleagues concerning the questions from Eastman?

Please note, I changed my email address, I dropped the "R" in front of Ashby.

Regards,  
Ashby

Kim and Alan,

How are you doing?

Below are some questions from Eastman Chemical in Kingsport, TN. I spoke with Betty Fite and she said that she had spoken with someone at EPA Region 5 who couldn't answer her questions but would forward them to D.C., and then a receptionist at EPA Region 4 who said she should speak with someone here at TDEC.

If you are not the people that could answer the questions, could you please forward the email to correct contact person and include Trey White ([Trey.White@tn.gov](mailto:Trey.White@tn.gov)) and I in the correspondence?

Thank you for your help with this.

Regards,  
Ashby Barnes

**To:** R.Ashby Barnes <[R.Ashby.Barnes@tn.gov](mailto:R.Ashby.Barnes@tn.gov)>

**Subject:** [EXTERNAL] Do you accept chemical recycling (molecular recycling) products?

Hi Ashby, it was so nice to talk with you yesterday. We are very interested in the RCRA's recycling program and we are requesting EPA's support for our molecular recycling process. We have a few questions about the Comprehensive Procurement Guidelines (CPG) program.

- **How do we qualify our molecular recycling products/process?**
- Are molecular recycled products accepted for the CPG product list?
- Does EPA have any guidelines or regulations on ways to engage in the program?

Our CEO, Mark Costa is an advocate of creating a true [closed-loop process for hard-to-recycle plastics](#).

We are currently working on two initiatives to create a circular economy:

- **Carbon renewal technology, or CRT**, which breaks down waste plastic feedstocks to the molecular level before using them as building blocks to produce a wide range of materials and packaging. The company claims this enables waste plastics to be recycled an infinite number of times without degradation of quality.
- **Polyester renewal technology, or PRT**, which involves taking waste polyesters from landfills and other waste streams and transforming them back into a raw material that the company claims is indistinguishable from polyester produced from fossil-fuel feedstocks.

Any information you can provide is appreciated.

Thank you very much for your time,  
Betty
